[EEL480] Laboratório de sistemas digitais Relatório 02

Artur Amaral 15 de Outubro de 2021

1. Introdução

O seguinte relatório descreve a implementação de um jogo da forca em linguagem VHDL. Para escrita e teste do código, utilizou-se o software de desenvolvimento Quartus II Lite, da Intel. O projeto final foi aplicado em uma placa de prototipagem FPGA Altera DE2-115, cuja configuração é feita remotamente pelo serviço online Labsland.

2. Desenvolvimento do projeto

O projeto implementa uma máquina de estados, pois a lógica do jogo da forca é fundamentalmente sequencial. A palavra secreta escolhida foi **123321.**

2.1 Especificações de entradas e saídas

A interface com o sistema é feita através das entradas e saídas descritas na tabela abaixo. Em suma, as **9 chaves** representam as possibilidades de **entrada** do usuário, só podendo ser acionadas uma única vez durante a progresso de um jogo (O próprio comportamento de "switch" das entradas já induz a esse funcionamento). Dos **displays de 7 segmentos**, **6** são utilizados para exibir ao jogador os **caracteres que já foram acertados**, enquanto **1** deles é reservado para o fim de uma partida, quando exibe uma "**flag" indicativa do resultado do jogador** - "G" para ganhou, "P" para perdeu. Por fim, três LED's são utilizados para indicar o número de "vidas" do jogador. A cada erro, um LED se apaga. O apagar de todos os LED's - i.e. três erros - leva o jogador à derrota.

Entradas			
9 switches	{0,1,2,3,4,5,6,7,8,9}	SW: in std_logic_vector(17 downto 0);	
Saídas			
3 leds	indicador de vidas	LEDG: out std_logic_vector(3 downto 0);	
6 hex display	exibição da palavras	HEX1: out std_logic_vector(6 downto 0); HEX2: out std_logic_vector(6 downto 0); HEX3: out std_logic_vector(6 downto 0); HEX4: out std_logic_vector(6 downto 0); HEX5: out std_logic_vector(6 downto 0); HEX6: out std_logic_vector(6 downto 0);	
1 hex display	"G" ganhou, "P" perdeu	HEX7 : out std_logic_vector(6 downto 0);	

2.2 Especificações da máquina de estados

O conjunto de possíveis estados nessa configuração de jogo da forca é exibido na tabela abaixo, que, consequentemente lista o nome de todos os estados codificados no código VHDL.

Na tabela, foram divididos logicamente em colunas para facilitar a compreensão. Existem os estados iniciais, que representam situações de início e fim do jogo. A divisão em colunas do resto dos estados é marcada pelo número de vidas restantes. Para cada uma das possibilidades de vidas restantes, existem diversas possibilidade para a pergunta "Qual dos caracteres já foi acertado?". E a reposta é descrita no nome do estado pelos números já acertados seguidos pela palavra "hit".

Exemplificando: O estado 13_hit_two_lives significa que o jogador já acertou os números 1 e 3, mas já teve um erro, logo, possui duas vidas. Consequentemente, se sua próxima entrada for 2, ele irá para o estado win, mas se for qualquer outra, irá para o estado 13 hit one life, e assim sucessivamente.

Conjunto dos estados possíveis				
Estados terminais	Restam 3 vidas	Restam 2 vidas	Resta 1 vida	
initial_state	1_hit_three_lives	no_hits_two_lives	no_hits_one_life	
win	2_hit_three_lives	1_hit_two_lives	1_hit_one_life	
lost	3_hit_three_lives	2_hit_two_lives	2_hit_one_life	
	12_hit_three_lives	3_hit_two_lives	3_hit_one_life	
	13_hit_three_lives	12_hit_two_lives	12_hit_one_life	
	23_hit_three_lives	13_hit_two_lives	13_hit_one_life	
		23_hit_two_lives	23_hit_one_life	

Abaixo, segue a descrição completa da tabela de transição de estados do sistema. É pertinente analisá-la sob a perspectiva de um jogador, para comprovar que, apesar de extensa, é bastante intuitiva.

Estado atual	Entrada	Próximo estado
initial_state	1	1_hit_three_lives
initial_state	2	2_hit_three_lives
initial_state	3	3_hit_three_lives
initial_state	other	no_hits_two_lives
no_hits_two_lives	1	1_hit_two_lives
no_hits_two_lives	2	2_hit_two_lives

3. Conclusão

Dada a proposta do roteiro, considero que a implementação do projeto foi um sucesso. Funcionou bem no Labsland e considero que sua solução foi simples, o que é um ponto bastante positivo da implementação.
